

# ITDT

Regional Center of Excellence for Latin  
America and the Caribbean  
collaborating with the  
REGATTA Project - UNEP

# ITDT provides technical assistance on 4 main issues (1)

---

1. **Analysis of synergies between adaptation and mitigation options in key sectors (coastal zones, tourism, infrastructure, agriculture, energy, transport, biodiversity)**
2. **Identification of financial opportunities for adaptation and mitigation actions and support for financial proposals preparation**
3. **Capacity building (methodologies, information systems, data collection, training, public awareness and dissemination activities)**

# ITDT provides technical assistance on 4 main issues (2)

---

## 4. NAMA development

- Screening of opportunities in key sectors (energy, transport, agriculture, etc.)
- Identification of regulatory, institutional and financial country-specific needs
- Identification of national key actors and roles (public, private, civil society)
- Identification of existent and potential barriers and ways to overcome them

## Why should developing countries elaborate NAMAs?

- To be able to adopt new technologies and practices that allow:
  - Decoupling growth from emissions
  - Reducing imports of fossil fuels
  - Increasing investment potential for adaptation
  - Increasing economic efficiency
  - Improving overall competitiveness
  - Preempt market barriers to key exports
- NAMAs vs CDM projects: will there be market for CERs after 2012?
